Degree Description:

Professional and technical communication encompasses more than sixty professional directions, and our program instructs broadly enough to allow you to choose from some of the most interesting professions in the field. In addition to learning how to write and edit professionally, you may design webpages, create technical animations and videos, program special effects for computer applications, study websites for usability, publish book length manuscripts, and create games in two and-three-dimensions. With these studies, students will build strong bases in both Applied Learning and Intellectual Skills.
